Abstract

E  
5 The present invention is a method of treatment  
for a patient with cancer. In particular, it is a method  
of treating patients having ~~lymphomas or~~ breast cancer  
using the microtubule agent, Taxol. The present method of  
administration, serves to prevent or retard the adverse  
side effects associated with Taxol and reduces the chances  
of a patient developing mdr Taxol resistance. The novel  
method of treatment provides a low-dose, longterm exposure  
10 to Taxol in a patient.
